

IRAJE PRIVILEGED IDENTITY MANAGER

IMPLEMENTATION OF IRAJE PIM IN A LEADING CONGLOMERATE

Introduction

Customer is a 125+ year old Indian conglomerate headquartered in Mumbai, India with revenues of over US \$4.5 bn. It is managed and largely owned by a very prominent business family. It operates in sectors as diverse as real estate, consumer products, industrial engineering, appliances, furniture, security and agricultural products.

Key Challenges

- Centralized infrastructure managed by multiple vendors remotely
- Unable to manage the critical enterprise passwords
- Security incidents happening in the organization
- Unable to get visibility on the IT operations

Iraje PIM Highlights

- Identity and access governance of privileged users
- Visibility and control on enterprise assets of the organization
- Improved governance
- Simplified Audits and Compliance

Customer Speak

We are very happy with the quick implementation and rollout of PIM to our entire vendor ecosystem. We were able to successfully enforce PIM in the organization and get better visibility and control on our critical datacenter environment.

- CISO

Iraje PIM solution

Customer is a very large conglomerate which operates in multiple business verticals. Their entire IT function is centralized to service all the businesses centrally from Mumbai, India.

The entire infrastructure is centrally hosted and managed by their internal team with the help of over 50+ partners and over 200 admins spread all over the country.

The vendor resources remotely manage all the critical assets hosted centrally and support the business.

They wanted a solution that can help manage multiple vendors spread across the geography and get visibility and control on their privileged accesses. After thorough evaluation of multiple vendors and doing multiple POCs for over 6 months, they chose Iraje PIM for its easy of deployment, use and maintenance.

Outcomes and Benefits

The implementation took 2 weeks and rollout was done to all the vendor resources across all the locations.

They enforced PIM in their organization and were able to quickly see the controls in place. They were very aggressive with their internal change management process and were quite committed to enforce the access of all privileged users through Iraje PIM.

Within a space of less than 2 months they

- got full visibility and control on their environment
- were able to manage multiple vendors across multiple locations
- successfully showed the ROI by reducing resources required to manage the infrastructure.
